TO WHOM IT MAY CONCERN

SUBJECT: periodic inspection of steel cable Retractable Fall Arresters manufactured by C.A.M.P. Spa

We hereby inform that we have included the information about periodic inspection of steel cable Retractable Fall Arresters (COBRA) on the “Management PPE” training course.

A competent person with the PPE training Certificate released by C.A.M.P. is now able to make the periodic inspection for all COBRA devices, referring to the technical document prepared together with this declaration.

The intervention of an authorized C.A.M.P. repair center, previously necessary for the periodic inspection, is now required only in case that the competent person detects a damage or a bad function and the device needs a reparation (such as replacement of the steel cable or repair after a fall: these operations are exclusive for C.A.M.P. authorized centers).

Kind Regards,

Antonio Codega
